AM-2001: Solid Mechanics

Teaching Scheme

Lectures : 4Hrs/Week
Tutorials :-----
Total Credits : 4

Evaluation Scheme

Test- I : 15 Marks
Test- II : 15 Marks
Teacher Assessment : 10 Marks
End-Semester Examination : 60 Marks

Pre-requisites : Fundamental knowledge of Physics, Engineering Mechanics (Static) and Engineering Mathematics

Course Description : The mechanics of deformable solids or strength of materials or solid mechanics or mechanics of materials, as it is commonly called, is one of the core subject that need to be studied by all engineering students. The course builds on the fundamental concepts of engineering mechanics course. Primary aim of this course is to introduce students to the fundamental concepts and principles applied by engineers - whether civil, mechanical, aeronautical, etc. - in the design of structures of all sorts of sizes and purpose. The course content have been presented in five units so that the students can develop the logic and get insight to analyze beams, trusses and solid circular shafts under various actions.

Course Objectives : The objective of this course is to learn the fundamental concepts of stress, strain, and deformation of solids with applications to bars, beams, and columns. Detailed study of engineering properties of materials is also of interest.

The students will:

1. Gain a fundamental understanding of the concepts of stress and strain by analysis of solids and structures
2. Study engineering properties of materials, and stress-strain relationship
3. Learn fundamental principles of equilibrium, compatibility, and principle of superposition in linear solids and structures
4. Analyze determinate and indeterminate axial members, torsional members, and beams, and determinate trusses to determine axial forces, torque, shear forces, and bending moments

Course Outcomes: Students successfully completing this course will have a clear and thorough understanding of the fundamental concepts of mechanics of solids and structures and basic analysis and design skills. The students will have the ability to perform stress, strain, and force and deformation analysis by hand. The students will be able to or have:

1. Fundamental understanding of the concepts of stress and strain in mechanics of solids and structures and material properties
2. Apply the fundamental concepts of principle of superposition, equilibrium, compatibility and stress-strain relationships to the solid and structural mechanics problems
3. Analyze determinate and indeterminate bars, beams, and determinate trusses to determine axial forces, torques, shear forces, bending moments and slopes and deflections.
4. Physical insight into distribution of stresses and strains in structural members by determining stress, strain, and deformation of bars, trusses, and beams, and performing stress and strain transformations.

Detailed Syllabus:

UNIT-1 (a) : Shear Force, Bending Moment Diagrams of Statically Determinate Beams

Axial force, shear force and bending moment diagrams for determinate beams for all types of loading, Relationship between intensity of loadings, shear force and bending moment at a section. **(05 Hrs)**

(b) : Analysis of Statically Determinate Plane Framed Structures

Concept of perfect, Deficient and Redundant frames, Analysis of trusses by Method of resolution or Method of joints and Method of sections . (03 Hrs)

UNIT-2 : Simple Stresses and Strains (08 Hrs)

Concept of normal stress and shear stress, Concept of normal strain and shear strain, Stress and strain diagram, Hooke's law, Generalised Hook's Law Elastic constants, Volumetric stress and strain, Stresses and strains in uniform and varying sections under axial loading, Saint Venant's principle, Stresses and strains in compound bars under axial loading, Concept of residual stresses, Thermal stresses and strains.

UNIT-3: Stresses in Statically Determinate Beams (08 Hrs)

- a) **Flexural Stresses:** Theory of pure bending, Elastic flexural formula, Assumptions in the theory of bending, Moment of resistance, Section modulus, Flexural stresses in beams with symmetrical solid, hollow and built-up sections, Bending stress distribution.
- b) **Shear Stresses:** Concept of shear stress, Shear stress formula, Shear stresses in beams with prismatic rectangular, circular and built-up sections.

UNIT-4: Torsion of Circular Shafts (08 Hrs)

- a) **Theory of Torsion:** Concept of torsion, Torsion formula, Assumptions in the theory of pure torsion, , Torsional moment of resistance, Analysis of circular solid and hollow shafts, Shafts with fixed ends, Shafts in series and parallel.
- b) **Analysis of Columns and Struts:** Axially loaded compression members, Crushing load, Buckling or Critical or crippling loads by Euler's theory , Assumptions in Euler's theory, Concept of effective length, Effect of different idealized end conditions, slenderness ratio, Limitations of Euler's formula, Rankine's theory.

UNIT-5 a): Slope and Deflection of Statically Determinate Beams (08Hrs)

Concept of slope and deflection, Equation of elastic curve, Slope and deflection of beams subjected to external loads by double integration method, Macaulay's method, moment area method Deflection by principle of superposition.

- b) **Principal Stresses and Strains:** Stresses on oblique plane, Concept of principal stresses and strains, Analytical and graphical method (Mohr's circle for plane stresses) to determine principal stresses and strains.

CE 2002: FLUID MECHANICS

Teaching Scheme:

Lectures: 4 hrs/ week

Examination Scheme

Test 1: 15 marks

Test 2: 15 marks

Teacher's Assessment: 10 marks

ESE: 60 marks

Course Description: Fluid Mechanics is a course that deals with the analysis and quantification of effect of the forces exerted by a fluid on Civil Engineering Structures. In order to design any water retaining structure or a water conveyance system it is necessary to know the fluid properties and its effect on the system. The behavior of fluid flow varies with the properties of fluid, flow characteristics and the surroundings. The fluid behaves differently when it is at rest and in motion. The design criterion is decided on the basis of properties of fluid and classification of flow. In general the fluid flow problems that an Engineer deals with include the fluid flow in closed conduits and in open channel, this course covers all the aspects of fluid flow characteristics and design in pipe flow and also open channel flow. This course is very useful for Civil Engineer as he has to design the Water Conveyance Systems, Design capacity of the Conveyance system, Design of Water retaining structures, Flow regulation system, Discharge measurement etc. This course also forms a prerequisite course for the Water Resources Engineering and Water Power Engineering.

Course Educational Objectives:

1. To understand conceptually the properties of fluids, fluid statics and fluid dynamics
2. To expose to various pressure and discharge measuring devices, and use them in analysis and design.
3. The students will be able to understand, analyze and design the flow through pipes and open channels
4. The students will understand the application of impact of jet, turbine and pumps

Course Outcomes Expected: On completion of this course

1. The student will be able to assess the properties of fluids, effect of fluid at rest and also when in motion.
2. The student will be able to measure discharge using measuring devices
3. The Students will be able to analyze and design pipe network and canal
4. The students will be able to analyze and select the pumps and turbines as per requirements.

Total		15	15	10	60

UNIT-1

Properties of Fluids: Scope and application, classification of fluids, Rheological diagram, properties of fluids – Specific weight, specific volume, specific gravity, viscosity, compressibility, surface tension and capillarity.

Fluid Statics : Pressure at a point, Pascal's Law, measurements of fluid pressure, hydrostatics pressure on plane and curved surfaces, pressure diagram, concept of buoyancy, metacentre, determination of metacentric height, equilibrium of floating bodies.

8Hrs

UNIT - 2

Fluid Kinematics : Classification of fluid flows, steady, unsteady, uniform, non uniform , laminar, turbulent, Reynolds number, vorticity, rotational, ir-rotational flows, path line, streak line, stream tube. Continuity Equation, flow net.

Fluid Dynamics: Forces acting on fluid in motion, Euler's equation, Bernoulli's Equation, Momentum equation, correction factors. Measurement of Flow: Venturimeter, Pitot tube, orifices, mouthpieces, flow over notches and weirs. **8 Hrs**

UNIT – 3

Flow through Pipes: Major and minor losses, laws of friction, hydraulic gradient line and total energy line, flow through pipes, equivalent pipes and branching of pipes, three reservoir problems under steady state, Turbulent flow through pipes: Pandtl's theory, velocity distribution equation for smooth and rough pipes, mean velocity and variation of friction factor, Pipe Network Analysis.

Dimensional analysis and similarity: Dimensions of various physical quantities, Raleigh's method, Buckingham's theorem, types of similarities and Distorted and non-distorted models. **8 Hrs.**

UNIT -4

Flow in open channels: Classification of channels, steady and unsteady flows, uniform and non uniform flows, laminar and turbulent flows, gradually and rapidly varied Flows, velocity distribution in open channels, basic equation of Fluid flow viz. continuity equation, Bernoulli's equation and momentum equation as applied to Channel flow, uniform flow, Chazy's and Manning's equations, Specific energy diagram, specific force Diagram.

Non uniform flow: Energy equation for gradually varied flow (GVF), Basic assumptions and Equations, slope profiles with different combinations, Flow measurement appurtenances, Rapidly varied flow, phenomenon of hydraulic jump in rectangular channel section, basic equations, classifications and applications of hydraulic jump, conjugate depths and its computation.

8 Hrs.

UNIT-5

Water Power Engineering:

Turbines- Classification and types of turbines, impulse and reaction turbines, components and parts, efficiency and characteristics of turbines based on Performance, specific speed, selection criteria for turbines, Governing of turbines, cavitations, draft tube and its function.

Centrifugal pumps: Parts of centrifugal pumps, Types, construction and principle of working, Principle of similarity, efficiencies, priming of pumps, cavitations. **Reciprocating pumps:** Types, working principle, slip, Air vessel and its function, multi cylinder pumps.

Impact of jets: Impulse momentum equation, jet force on stationary and moving vanes, jet propulsion. **8 Hrs.**

CE 2003: Survey I	
Teaching Scheme	Examination Scheme
Lectures: 3 Hrs/Week	Class Test I (15 Marks)
Credits 3	Class Test II (15 Marks)
	Teachers Assessment (10 Marks)
	ESE Assessment (60 Marks)

Prerequisites: Basic knowledge of measurements and its units.

Course description: This course introduces the methods and instruments for measurement necessary for plotting maps and plans. Topics range from surveying, leveling, theodolite, plane table surveying and tacheometry.

Course Objectives:

1. To introduce basic concepts of surveying
2. To study methods and equipments for linear and angular measurements
3. To compute area and volume from given map

Course Outcomes

As an outcome of completing the course, students will able to:

CO1	Select the equipment for linear and angular measurement
CO2	Operate levels and theodolite
CO3	Use different types of surveying and levelling equipments
CO4	Apply the knowledge of surveying and levelling on field

Detailed Syllabus:

Unit 1	<p>LINEAR AND ANGULAR MEASUREMENTS</p> <p>a. Survey: object, classification, principles, difference between map and plan,</p> <p>b. Linear measurements: methods of distance measurements, instruments for measurement of distance, chaining a line, chaining along slope, offsets: instruments for laying offsets, triangulation, chain and cross staff survey, errors</p> <p>c. Angular measurements: Types of compass, Bearings, local attraction and correction to bearings, Chain and compass traversing, graphical method of adjustment, errors</p>
Unit 2	<p>LEVELLING</p> <p>a. Definition, study of auto level, laser level, digital level,</p> <p>b. Types of leveling: simple, differential, fly, check, profile, reciprocal etc. Profile leveling- plotting longitudinal section, cross section, leveling difficulties, volume calculations</p> <p>c. Contouring: Definition, characteristics, use, methods of locating and interpolating contour lines</p>

Unit 3	THEODOLITE a. Introduction to vernier theodolite, types of theodolite, principal axes b. Uses of theodolite: Measurement of horizontal angle, vertical angle, magnetic bearing, prolonging a line, lining in, measuring deflection angles, direct angles, finding out elevations of objects (base accessible or inaccessible) by trigonometrical observations c. Theodolite traversing- Computation of consecutive and independent coordinates, adjustment of a closed traverse, Gale's traverse table, omitted measurements, area by coordinates
Unit 4	A) PLANE TABLE SURVEY Introduction, accessories, temporary adjustments, advantages and disadvantages, methods, two point and three point problem and their solution B) Testing and permanent adjustments of Dumpy Level and Transit
Unit 5	A) TACHEOMETRY a. Introduction, instruments, methods, principle of stadia method, determination of tacheometric constants, anallatic lens, horizontal and inclined sights with vertical staff b. Tacheometric contouring B) MINOR INSTRUMENTS Study and use of planimeter, abney level, box sextant, Indian pattern clinometer

Total Credits	01	Viva-voce Total	25 Marks 50 Marks

OBJECTIVE:

In this laboratory, students will have the opportunity to apply loads to various materials under different equilibrium conditions. The student will perform tests on materials in tension, compression, torsion, bending, and impact. These conditions and/or constraints are designed to reinforce classroom theory by having the student perform required tests, analyze subsequent data, and present the results in a professionally prepared report. The machines and equipment used to determine experimental data include universal testing machines, torsion equipment, compression testing machine, impact tester, hardness tester, etc. Data will be collected using Dial indicators, extensometers.

Course Outcome (COs):

On successful completion of this course, students will be able to-

1. Determine the Young's modulus for ductile materials.
2. Analyze the various points on stress strain diagram.
3. Calculate the modulus of rigidity of ductile materials.
4. Calculate & Compare the hardness values for various materials.
5. Apply the concept of impact loading and to determine impact values for various materials.
7. Analyze the compression strength of different materials
8. Determine the shear stress of different materials.

Minimum ten experiments shall be conducted from the following list.

List of Experiments:

- 1) Tension test on Mild steel, High Yield strength deformed and cast iron specimen
- 2) Cold bend test on Mild and HYSD (I.S. 1608) steel bars.
- 3) Compression test on metals (I.S.1708).
- 4) Compression test on Wood (parallel and perpendicular to grains) (I.S.1708).
- 5) Direct shear test (Single, Double) on steel, Copper, brass specimen (I.S 5242-9779).
- 6) Punching shear test on thin metallic sheets.
- 7) Torsion test on circular mild steel bar (I.S. 1717).
- 8) Izod and Charpy Impact test on metals (IS: 1598 and IS: 1757 – 1973).
- 9) Study of Buckling of column.
- 10).Bending test on Timber beam.
- 11) Flexural test on Concrete Beams
- 12) Compression tests on concrete cubes
- 13) Testing of structural steel

Term work shall consist of submission of journal containing the experiments performed by the candidate. Viva Voce examination based on the term work shall be conducted at the end of the semester.

CE 2005: Lab: Fluid Mechanics

Teaching Scheme:
Practicals: 2 Hrs/ Week

Examination scheme:
Oral : 25marks
Term Work : 25 Marks

Course Educational Objectives:

1. To provide practical experience through laboratory work to understand the theory of fluid mechanics and to apply this to practical situations
2. Use various measuring devices for data acquiring and to establish its correlation with theory.
3. To establish relations between the pre and post jump behavior of fluid flow

Expected Course Outcomes:

1. The student will experience the theoretical concepts through the experimentation
2. The students will be able to calibrate the measuring devices and will be able to use the output of those devices for other analysis and design.
3. The students will be able to calculate the post jump flow characteristics in open channel

Teaching Scheme

Lectures	4 Hrs/Week
Tutorials	0 Hrs/Week
Total Credits	4

Evaluation Scheme

Test	15 Marks
Test	15 Marks
Teacher Assessment	10 Marks
End-Semester Examination	60 Marks

Prerequisites:

Student should know the different civil engineering material.

Student should know the common material used for construction.

Student should have knowledge of basic civil engineering.

Course Descriptions:

Civil engineering materials covers information of important civil engineering materials, importance and information of Indian standard codes applicable to civil engineering material also cover the concrete production, mix design, and properties of concrete.

Course Objectives:

1. To identify suitable materials for construction of particular component of a structure.
2. To understand codal limitation for various materials.
3. To understand properties and uses of construction materials.

Course Outcome: On successful completion of this course, students will be able to-

- 1) Explain the properties of civil engineering materials.
- 2) Estimate the proportions of ingredients of civil engineering materials.
- 3) Discuss the properties of civil engineering materials.
- 4) Design the concrete mix.

S: Strong M: Moderate L: Low

UNIT1-Introduction to Stone , Bricks, Tile Roofing and Flooring ,Timber, Lime, Manufacture, properties and Codal requirements of Materials .

Cement:Production, chemical composition, types of cement and their properties,, hydration process, physical and chemical tests and standards ,Chemical and Mineral Admixtures

UNIT2-Fine Aggregate: Natural and manufactured sand, particle size distribution, fineness modulus, grading curves, specific gravity ,moisture content, bulking of sand, water absorption, bulk density and standard specifications, Coarse Aggregate:Types, particle size distribution, fineness modulus, grading curves moisture content, specific gravity, absorption, bulk density, flakiness index, elongation index, crushing value, impact value, abrasion and attrition and standard specifications Artificial Sand its properties and uses and comparison with Natural sand.

UNIT 3- Types of Paints, Enamels, Varnishes, Tar, Bitumen, Asphalt Properties and Uses. Modern material:Rubber, polymers, Fibres, Fibre reinforce concrete, properties and uses Introduction to Composite materials, precast, prestress, ferro-cement, heat insulating materials. Water proofing materials, sound insulating materials.

UNIT4-Types of structural steel, permissible stresses. Various Indian standard sections and their properties. Relevant IS specifications, prefabrication construction, metal sheets, hollow metal pipes, fabric membrane, ferrous metal and non-ferrous metals.

UNIT5-Concrete, Concrete production: batching, mixing, transporting, placing, compaction, curing Fresh concrete: workability and its measurement, cohesiveness, segregation, bleeding, setting and its measurement, Functioning of Ready Mix Concrete Plants, Fundamentals of Concrete mix proportioning: Characteristic strength of concrete, Quality control, Methods of concrete mix proportioning: IS Method

AM-2008 Structural Analysis

Teaching Scheme

Lectures	4 Hrs/Week
Tutorials	
Total Credits	4

Evaluation Scheme

Class Test-I	15 Marks
Class test-II	15 Marks
Teacher Assessment	10 Marks
End-Semester Examination	60 Marks

Prerequisites:

The students should have undergone course of AM 2001: Solid Mechanics

Course Description:

AM 2008 Structural Analysis subject provides better understanding of energy principles and their applications for the analysis of structures. Various methods for the analysis and suitability of a particular method based on the type of structure is also a part of the curriculum.

The understanding of this fundamental course will form the base for learning advanced subjects in structural analysis.

Course Objectives:

- 1) To equip the students with fundamental understanding of principle and methods used for the analysis of statically indeterminate structures.
- 2) To expose the students to the concept of influence lines and its applications.

Course Outcomes:

On the successful completion of this course, the student will be able to

CO1:	Distinguish between determinate and indeterminate structures and methods of analysis
CO2:	Apply force method for the of analysis of a given structure
CO3:	Apply displacement method for the of analysis of a given structure
CO4:	Demonstrate the ability to choose suitable method for the analysis

CO5:	Recognise the importance of influence line diagrams and its applications
------	--

Detailed Syllabus:

Unit 1	Fundamentals of Structural Analysis Review of strain energy, Energy theorems: Castigliano's theorems, reciprocal deflection theorem and their applications, Unit load method, Deflection of statically determinate pin jointed trusses, Degree of indeterminacy of a structure
Unit 2	Analysis of Indeterminate Beams Propped cantilever, Fixed and Continuous beams, Clapeyron's theorem of three moments, Yielding of supports, Deflection at a section using unit load method. Shear force, Bending moment at a section and Shear force and bending moment diagrams.
Unit 3	Analysis of Indeterminate Plane Frames and Trusses: Force Method Force method of analysis, Analysis of plane frames with degree of static indeterminacy up to three, Analysis of pin jointed trusses with degree of static indeterminacy up to two.
Unit 4	Analysis of Beams and Plane Frames: Displacement Method Slope Deflection Method: Slope deflection equations Moment Distribution Method: Carry over and distribution theorems Application of methods to analysis of beams and frames with degree of kinematic indeterminacy up to three.
Unit 5	Influence Line Diagrams and Rolling Loads Concept of influence line, Muller Breslau's principle, Influence line diagram for support reactions, shear force and bending moment at a section of statically determinate beams and forces in the members of statically determinate trusses. Wheel loads, Criteria for maximum shear force and bending moment

Teacher’s Assessment: Teacher’s Assessment of 10 marks is based on one or combination of the following,

- 1) Assignments
- 2) Quiz test
- 3) Mini Project
- 4) Oral Presentation
- 5) Punctuality

Teacher should make the students aware of these parameters of evaluation at the start of the course.

Prerequisites: No

Course description: This course introduces the elements of building planning, design and construction. This course forms the foundation of the Civil Engineering, in which he will be able to decide on the requirements of various types of buildings and its components along with the standard dimensions. He will be able to plan design and draw the drawings which are required to be submitted to the various authorities for permissions. The drawings prepared by the engineers are also used by the site engineer and hence the reading, understanding and execution of work as per drawings forms the major part of this course.

Course Objectives:

- To understand the requirements for various types of buildings, planning and designing
- To learn the functions of various components of buildings, the standard norms for its size and grouping so as to make it convenient for the stakeholder
- To decide the various construction techniques to be adopted for different construction works for field problems.

Course Outcomes:

On completion of this course, students will able to:

CO1	Decide the various components of buildings
CO2	Plan , Design and Draw various building drawings as per standard norms
CO3	Apply the knowledge of building planning and design the buildings

CO4	Able to decide the suitable construction technique / methods for various construction works
-----	---

Detailed Syllabus:

Unit 1	Relative functions and Role of owner, Architect, Structural Engineer and Contractor, Building byelaws of Municipal Council and Corporation, Principles of planning, Preparation of Submission and working Drawings.
Unit 2	Building Byelaws and design Principles of Buildings: - Functions of local authority, terminology and definition, site selection and its criteria, classification of buildings, area and height limitations, setback, floor area ratio, floor space index with the standard norms, parts of buildings, habitable room, kitchen, bathrooms and water closets, mezzanine floor, stair cases, drawing submission and approval procedure of building plans,
Unit 3	General requirements of residential buildings, Hospital, Primary school, High school, college building and commonly observed industrial buildings.
Unit 4	Construction Techniques, Formwork, Damp proofing, termite proofing and Fire protections, Shoring, Underpinning and scaffolding
Unit 5	Building Finishes: - Plastering, Pointing, White washing and colour washing, Distempering, painting, varnishing, Waterproofing Treatment, Plumbing services. Thermal and sound insulation, Ventilation and Air conditioning,

Teaching Scheme	Examination Scheme
Lectures: 3 Hrs/Week	Class Test I (15 Marks)
Credits 03	Class Test II (15 Marks)
	Teachers Assessment (10 Marks)
	ESE Assessment (60 Marks)

Prerequisites: Knowledge of measurements and mapping

Course description: This course introduces the advanced methods and instruments for measurement necessary for plotting maps and plans.

Course Objectives:

1. Understand the advanced methods in Survey.
2. Study the advanced methods & equipments for linear and angular measurements.

Course Outcome: On successful completion of this course, students will be able to-

CO1	Solve problems related with setting out the curves
CO2	Explain terminologies in photogrammetry and remote sensing
CO3	Describe hydrographic surveying
CO4	Illustrate the use of geodetic surveying
CO5	use advanced equipments and methods of mapping

Detailed Syllabus:

Unit 1	CURVES Introduction, degree and radius of a curve, Types of curve, Simple circular curve- Elements, setting out by linear and angular methods, Compound curves- Elements and setting out of compound curve, Transition curve- types, uses, length of transition curve, elements of transition curve, length of combined curve by method of deflection angle
Unit 2	PHOTOGRAMMETRY Introduction, types, types of photograph, Terrestrial photogrammetry, phototheodolite, principle of terrestrial photogrammetry, Aerial photogrammetry: technical terms, scale, ground coordinates, relief displacement, flying height, computation of length and height from photograph, flight planning, ground control, radial line method of plotting, Stereoscopic vision, fusion, stereoscope, parallax in aerial stereoscopic views, difference in elevation by stereoscopic parallax, Photographic interpretation, applications of photogrammetry, Introduction to remote sensing
Unit 3	A) HYDROGRAPHIC SURVEYING Introduction, horizontal and vertical control, Shore line survey, Tide, tide gauges, Sounding, equipment, shore signal, angle measuring instruments, locating the sounding, reduction of sounding, plotting the sounding
Unit 4	B) MODERN SYSTEMS IN SURVEYING AND MAPPING Electronic distance measurement, Digital theodolite, Total station, Global positioning system, Geographic information system
Unit 5	A. INTRODUCTION TO TRIANGULATION ADJUSTMENTS Kinds of errors, laws of weights, determination of most probable value of a quantity, normal equation, conditioned quantities, probable error, distribution of error to the field measurements, method of correlates, Introduction to Station adjustment, figure adjustment and spherical excess, adjustment of quadrilateral B. SETTING OUT WORKS Setting out buildings, culverts, bridges and tunnels

Term Work:

It shall consist of record of 12 experiments performed in the laboratory. The list of experiments is given below. A report of visit to a construction site shall also be included.

A) Cement (minimum 4)

1. Field Test of cement
2. Fineness by Air permeability Test
3. Standard consistency,
4. Initial and Final Setting time

5. Soundness
6. Compressive strength

B) Fine aggregate (minimum 2)

1. Sieve analysis to determine Fineness modulus and grading curve
2. Water absorption, moisture content and specific gravity
3. Bulking of sand

C) Coarse Aggregate (minimum 2)

1. Sieve analysis to determine Fineness modulus and grading curve
2. Water absorption, moisture content and specific gravity
3. Flakiness and Elongation Index of aggregates

D) Tests on Fresh Concrete (minimum 2)

1. Workability of concrete by slump test
2. Workability of concrete by compaction factor test
3. Workability of concrete by Vee Bee consistometer test
4. Workability of concrete by flow test

E) Test on Brick (minimum 2)

1. Water Absorption Test
2. Compressive Strength
3. Shape and Size Test

F) Test on Tile (minimum 2)

1. Tile Abrasion Test
2. Water Absorption Test
3. Hardness Test

G) Concrete mix proportioning using natural and manufactured sand as per IS 10262-2009

H) Visit to construction site.

Laboratory Course Outcomes

As an outcome of completing the Laboratory course, students will able to:

CO1	Identify the various components of buildings
CO2	Plan , Design and Draw various building drawings as per standard norms
CO3	Apply the knowledge of building planning and design the buildings as per clients requirement
CO4	Suggest different alternatives for grouping of units in a building together

Perform following experiments.

Sr. No.	Details
1	Measured Drawing of Residential Building (Including Site Visit)

2	Data Drawing for Residential Building (Load Bearing and Frame Structure)
3	Details of Data Drawing
4	Preparation of four plans of one room, two room tenements, Apartments and bungalow
5	Line Plan of at least four types of Public Buildings such as 1. High school/ Engineering College / Arts, commerce, Science College 2. Hospital of at least 100 beds 3. Any medium scale manufacturing industry 4. Commercial complex/ multiplex theaters/ shopping mall
5	Planning and Design of Public Building (Drawing) Drawing of one public building, using conventional or drafting software- Any one public building from above exercise 5 may be considered for detailed drawing purpose.

CE2014: Rural Technology	
Teaching Scheme Lectures: 3 Hrs/Week Credits 03	Examination Scheme Class Test – I (15 Marks) Class Test – II (15 Marks) Teachers Assessment (10 Marks) ESE Assessment (60 Marks)

Prerequisites: Basic knowledge of rural and urban society.

Course description: This course introduces the various characteristics of rural and urban society. The course include detailed information of various modern technology for rural development such as nursery production, greenhouses, vermi-technology, organic farming, bio-composting, low cost storage technologies for fruits and vegetables etc . You will also learn the various effects of those modern technologies on environment.

Course Objectives:

To understand need of rural development
 To learn various techniques for increase the crop production
 To understand various effects of modern technology on environment
 To identify suitable technique for rural development

Course Outcomes

As an outcome of completing the course, students will able to:

CO1	Understand the concept and necessity rural development
CO2	Use of modern techniques in crop production
CO3	Learn the solutions for storage of fruits and vegetables
CO4	Learn the choice of techniques for production and storage at available resources

Detailed Syllabus:

Unit 1	Rural social institution in India, characteristics of rural society, characteristics of urban society, contrast between rural and urban society, concept of social welfare, welfare organization and their role, need for rural industries, objectives and scope, relation between agriculture and industry
Unit 2	Perspectives of development, knowledge and actions, ethical problems, societal goals, change in societal forms, rural and urban statistics on inequality, unemployment, migration, pollution, depletion of natural resources, views on society and technology relationship, illustration on technology innovation from domestic, agricultural, energy and transportation sector.
Unit 3	Nursery production, importance and classification, establishment of commercial nursery- bed culture, manure and fertilizers, irrigation, protection, lifting, grading, storage, packing and transportation of nursery plants. Greenhouse definition, types of greenhouse structure, greenhouse framework, covering materials, greenhouse benches, climate control in greenhouse, automated systems in greenhouse, greenhouse precautions, advantages of greenhouse and greenhouse cultivation of tomato, cucumber, lady figure strawberry, Marigold, Rose etc.
Unit 4	Non-refrigerated Low Cost Storage Technology of Fruits and Vegetables: storage in pit, bulk storage of dried bulb crop, storage of root and tuber crops, storage using evaporative coolers, storage using windbreaks, storage in barns, storage in cellars, storage in clamps, storage in Zero Energy Cool Chamber, night ventilation storage. Organic Farming: Definition, its components, importance and certification
Unit 5	Vermi Technology: Earthworm classification, Species, External and internal features of verms, Use of earthworms, vermi-composting materials, requirement of vermin-culture and vermin-composting, Factors affecting earth worm’s growth, Types of vermi-composting, methods of vermi-composting, Harvesting and storage of vermi-compost, advantages of vermi-compost, Use and benefits of vermi-compost, Effect of vermi-compost on plants, chemical composition of vermi-compost, vermin-wash (worm-tea), Chemical composition of vermin-wash, Use and advantages of vermi-wash. Bio-composting: methods of bio-composting, decomposition process, difference between bio-compost and Farm yard manure (FYM), Materials used in bio-compost, advantages of bio-compost. Precaution needed for compost preparation. NADEP Compost: Preparation of NADEP compost, construction and design of NadeP compost tank, Material use for preparation of NADEP compost, Substrate use for the production of compost.

Teacher's Assessment: Teachers Assessment of 10 marks is based on one of the / or combination of few of following

- 17) Rural and urban sociology
- 18) Current status of rural development
- 19) Various techniques for crop production
- 20) Development v/s Degradation of environment
- 21) Power point presentation

Recommended Assessment Pattern

Open Elective – OE -3008 DISASTER MANAGEMENT

Teaching Scheme:Examination Scheme:

Lectures: 3 Hrs/Week

Test I: 15 marks

Test II: 15 marks

Teacher’s Assessment: 10 marks

ESE: 60 marks

Course Outcome: On successful completion of this course, students will be able to-

1. Describe the concept of terminology used in disaster management.
2. To understand medical and psycho-social response to disasters.
3. To gain understand approaches of disaster risk reduction.
4. To build skills to respond to disaster.
5. To enhance awareness of disaster risk management institutional processes in India.

Assessment Tool	K1	K2	K3	K4	K5	K5

K5	Create			
Total		30	10	60

Unit I – Types of Disasters

Concept and definition of disaster, types of disaster, natural disaster (earthquake, cyclone, floods, Fires, volcanoes, Lightning, Landslides, Cloud bursting), man-made disaster (armed conflicts and civil strip, technological disaster, human settlement, slow disaster (famine, draught, epidemics) and rapid onset disaster (air crash, tidal waves, tsunami), difference between accident and disaster, human resettlement and rehabilitation issues during and after disasters, effect on structural element.

Unit II -Approaches to Disaster Risk Reduction

Disaster risk reduction strategies, disaster cycle – its analysis, phases,, culture of safety, prevention, mitigation and preparedness, early warning system models in disaster preparedness, community based DRR, structural and non structural measures in DRR, policies for disaster preparedness programs, preparedness planning, roles and responsibilities, DRR master planning for future, capacity building.

Unit III –Disaster Risk Management in India

Hazard and vulnerability profile of India, disaster management Indian scenario, India's vulnerability profile, Components of disaster relief : Water, flood, sanitation, shelter, health, waste management, Institutional arrangements (Mitigation, response and preparedness, disaster management act 2005 and policy guidelines, other related policies, plans, programmes and legislation)

Unit IV – Disaster Management

Effect to migrate natural disaster at national and global levels. International strategy for disaster reduction. Concept of disaster management, national disaster management framework; financial arrangements; role of NGOs, community –based organizations and media. Central, state, district and local administration; Armed forces in disaster response; Disaster response; Police and other organizations.

Unit V – Post Disaster Measures

Retrofitting of Structures, Sources of weakness in framed buildings, Classification of retrofitting techniques, Conventional and non-conventional methods, Comparative study of various methods and case studies. Introduction to Base Isolation systems. IS code provisions for retrofitting of masonry structures, failure modes of masonry structures and repairing techniques.

CE2014: Watershed Management	
Teaching Scheme Lectures: 3 Hrs/Week Credits 03	Examination Scheme Class Test – I (15 Marks) Class Test – II (15 Marks) Teachers Assessment (10 Marks) ESE Assessment (60 Marks)

Prerequisites: nil

Course description: This course introduces the watershed and different techniques which are used for its sustainable development. The course provides experience in solving the difficulties in watershed

management, use of modern techniques, role of various sectors, etc. You will also learn necessity of watershed management.

Course Objectives:

- To understand the concept of watershed management, its necessity and modeling
- To understand how to tackle with difficulties in watershed management
- To learn various techniques of watershed management
- To identify different sector which are beneficial in watershed management

Course Outcomes

As an outcome of completing the course, students will able to:

CO1	Understanding the concept and necessity of watershed management
CO2	Learning the solutions for various difficulties in watershed management
CO3	Use of modern techniques in watershed management (such as GIS)
CO4	Learn the integrated approach for watershed management

Detailed Syllabus:

Unit 1	(Introduction and basic concepts) Concepts of watershed, introduction to watershed management, its necessity and objective, different stake holders and their relative importance, characteristics of watershed, hydrology and hydrogeology, socio-economic characteristics, watershed management policies and decision making.
Unit 2	(Watershed modeling) standard modeling approaches and classification, system concepts for watershed modeling, different hydrologic processes accounted in modeling, modeling on rainfall runoff process, subsurface flows and groundwater flows, planning of watershed management activities, preparation of action plans, administrative requirements.
Unit 3	storm water management, design of drainage system, flood frequency analysis, flood routing through channels and reservoir, flood control and reservoir operation, case studies of flood damages. Types of erosion, soil erosion, estimation of soil erosion, universal soil loss equation, effects of erosion on land fertility and land capability, control measures to erosion, reclamation of saline and alkaline soils.
Unit 4	Drought assessment and classification, drought analysis technique, drought mitigation planning. Rainwater harvesting, catchment harvesting, harvesting structures.
Unit 5	Introduction to integrated approach, conjunctive use of water resources. Role of ecosystem, cropping pattern, sustainable agriculture, bio-mass management, dry land agriculture, social forestry, management of forest, wild land and grass land. Role of GIS in watershed modeling, its need and necessity, data development, and its application.

Recommended Books:
