Government College of Engineering, Aurangabad Department of Electrical Engineering

NEP Compliant tentative B. Tech structureAnd

Curriculum of

FY B. Tech. (Electrical)23-24 onwards as per NEP2020

PROGRAMME EDUCATIONAL OBJECTIVES(PEO's)

- 1. Our graduates will excel in professional career in technology and management with appropriate consideration for safely, culture, energy optimization and environment.
- 2. Our graduates will excel in higher studies, research and competitive examinations.
- 3. Our graduates will become successful entrepreneur.
- 4. Our graduates will practice good human values, professional ethics and social responsibilities

Program Outcomes

- **1. Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- **2. Problem Analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- **3. Design/development of solutions:** Design solutions for complex engineering problems and design systems components or processes that meet the specified needs with appropriate consideration for the public health and safety and the cultural, social and environmental consideration. To use modern engineering IT tools to solve and model electrical engineering problems.
- **4.** Conduct investigations of complex problems: Use research based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.
- **5. Modern tool usage:** Create, select and apply appropriate techniques, resources and modern engineering and IT tools including predictions and modeling to complex engineering activities with an understanding of the limitations
- **6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and consequent responsibility relevant to the professional engineering practice.
- **7. Environment and sustainability:** Understands the impact of professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of and need for sustainable development.
- **8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **9. Individual and team work:** Function effectively as an individual and as a member or leader in diverse teams, and multidisciplinary settings.
- **10. Communications:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentations, make effective presentations and give and receive clear instructions.
- **11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects multidisciplinary environments.
- **12. Life-long learning:** Recognize the need for and have preparation and ability to engage in independent and life-long learning in the broadest context of technological changes.

Program Specific Outcomes

- 1. Identify, formulate problems in power system domain and apply subject knowledge to provide solutions
- 2. Classify, make use of various electrical machines, power electronics circuits and electrical drives for engineering applications and investigate for suitability and troubleshooting
- 3. Analyze and apply concepts of electronics, control systems and instrumentation for engineering applications

Total Credits for the completion of B.Tech. in Electrical Engineering:

The total number of credits proposed for the four-year B.Tech Electrical Engineering with 1 Multidisciplinary minor (Compulsory) degree is **176** as per the structure given below:

Structure of B. Tech. in Electrical Engineering with multidisciplinary minor:

Semester	lectrical Engineer	I	II	III	IV	V	V I	VI I	VI II	Total Credit s
Basic Science Course	BSC	08	08							16
Engineering Science Course	ESC	07	07							14
Program Core Course (PCC)	Program Courses		02	12	11	15	1 2	08		56
Program Elective Course (PEC)	Program Elective					04	0 8	0 8	-	20
Multidisciplinary Minor (MD M)	Multidisciplina ry Courses		-	04	03	04	0 3			14
Open Elective (OE) Other than a particular program	OE	1		03	03	02				08
Vocational and Skill Enhancement Course (VSEC)	Skill Courses	02	02		02		0 2			08
Ability Enhancement Course (AEC -01, AEC- 02)	Humanities Social Science and		02		02					04
Entrepreneurship/Econo mics/ Management Courses	Management (HSSM)			02	02					04
Indian Knowledge System (IKS)		02								02
Value Education Course (VEC)				02	02					04
Research Methodology	Experiential								04	04
Comm. Engg. Project (CEP)/Field Project (FP)	Learning Courses	1		02				-	-	02
Project								02	02	04
Internship/ OJT									12	12
Co-curricular Courses (CC)	Liberal Learning Courses	02	02						-	04
Total Credits (Major)		21	23	25	25	25	25	18	18	176

Students can opt for any of the following as per the rules and regulations given by institute:

- 1. B. Tech with one Multidisciplinary Minor = Total 176 Credits
- 2. B Tech with two Multidisciplinary Minors = Total 190 Credits
- 3. B. Tech with one Multidisciplinary Minor and Honor = Total 194 Credits
- 4. B. Tech with one Multidisciplinary Minor and Honor by research = Total 194 Credits

Course Description:

MABSC1002: MATHEMATICS I is a compulsory course for first year B. Tech. Electrical engineering and Electronics &Telecommunications engineering students.

Course Outcomes: After completing the course, students will be able to:

	Course Outcomes	Bloom's Taxonomy	Unit
		Level	
CO1	Define Beta, Gamma and error functions and find the roots of	K1	1,2,3,4,5
	Complex Numbers, Rank of Matrix, limit of function, series		
	expansion and maxima – minima of functions, understand the		
	basic concepts of probability and find the probabilities of		
	events		
CO2	Summarize the Complex Numbers; Explain the Rank of	K2	1,2,3,4
	Matrix, successive differentiation, Special functions (Beta and		
	Gamma functions)		
CO3	Identify the real and imaginary part of logarithm of complex	K2	1,2
	numbers, Eigen values and Eigen vectors.		
CO4	Solve the system of linear equations using Gauss elimination	K2	2,3,4
	and Gauss Jordan Method, Leibnitz's theorem, definite		
	integrals using Beta and Gamma functions and definite		
	integrals using rule of Differentiation under integral sign.		
CO5	Apply DeMoivre'stheorem, Cayley Hamilton theorem,	К3	1,2,4,5
	knowledge of integral calculus and Apply the basic rules and		
	theorems in probability including Bayes's theorem		

Detailed Syllabus:

Unit 1	Complex Numbers
	Definition of complex numbers, Argand Diagram, De-Moivre's theorem and its
	application to find roots of algebraic equations, expansions of trigonometric
	functions, Circular and Hyperbolic functions inverse Hyperbolic functions,
	Logarithm of complex numbers, separation into real and imaginaryparts.
Unit 2	Matrices
	Rank of matrix, echelon form of matrix, normal form of matrix, algebraic system
	of m linear equations in n unknowns, Gauss elimination and Gauss Jordan
	elimination method, linear dependence and independence of vectors, orthogonal
	matrix, linear transformations, matrix of linear transformation, rank nulity theorem,
	Eigen values and Eigen vectors, Cayley Hamilton theorem and its applications.
Unit 3	Differential Calculus
	nth order ordinary derivatives of elementary functions, Leibnitz's theorem,
	expansion of function in power series, Taylor's series, Maclaurin's series
	indeterminate forms and L'hospital rule, maxima and minima, converge of
	sequence and series, range of convergence of power series, test of convergence –
	ratio test and comparison test.
Unit 4	Integral Calculus
	Beta function, Gamma function, rules of Differentiation Under Integral Sign, error
	function, application of definite integrals to evaluate surface area and volume of
	revolutions.
Unit 5	Elementary Probability Theory
	Introduction to probability, addition and multiplication law of probability,
	independent events, total probability, Conditional probability, Bayes' theorem,
	permutation and combinations.

Course description: The course is mandatory course for first year B. Tech. Civil, Mechanical and Electrical Engineeringprogramsin first semester. The course objective is to teach fundamental principles in Physics and relate the understanding to applications.

	Course Outcomes	Bloom's Taxonomy Level
CO1	Define interference, thin film interference, Fraunhofer diffraction, resolving power, polarization, double refraction, Free, damped and forced oscillations, resonance, state features of magnetic and dielectric materials, acoustical demands of building, methods of production of ultrasonic, types of energy bands.	K1
CO2	Explain the concepts interference, diffraction, polarization, dielectric and magnetic properties, semiconductors, architectural acoustics and ultrasonic, oscillations, resonance, wave motion,	K2
CO3	Illustrate the engineering applications of interference, diffraction, polarization, dielectric and magnetic properties, semiconductors and ultrasonic	К3
CO4	Identify, formulate and solve physical problems related to engineering	K4
CO5	Apply the fundamental principles of interference, diffraction, polarization, dielectric and magnetic properties, semiconductors, architectural acoustic and ultrasonic in engineering context	K5

DetailedSyllabus:

Unit1	Optics-
	Interference- Interference due to thin film of uniform thickness, wedge shaped
	film, Newton's rings formation and theory, Anti-reflection coating.
	Diffraction- Fraunhofer diffraction at single slit (geometrical method),
	Conditions for maxima and minima, Double slit Diffraction, Plane diffraction
	grating, Rayleigh's criterion of resolution, resolving power of grating.
	Polarization- Polarization by reflection, Polarization bydouble refraction, Phase
	difference and path difference, Quarter wave plate, Half wave plate,
	Superposition of e-ray and o-ray, Production of circularly and elliptically
	polarized light, Polaroid sheets.
Unit2	Acoustics and ultrasonic
	Acoustics- classification of sound, musical sound, noise, characteristics of musical sounds-pitch, loudness or intensity, measurement of intensity level, decibel, quality or timbre, reflection of sound, echo, reverberation, reverberation time, absorption of sound, absorption coefficient, Sabine's formula with derivation, factors affecting architectural acoustics.
	Ultrasonic- Production of ultrasonic waves by piezoelectric and magnetostriction
	method, engineering applications of ultrasonic waves.

Unit3	Engineering Materials-
	Dielectric properties of material- dielectric constant, induced dipole, permanent
	dipole, polarization in dielectric materials, types of polarization, polar and non-
	polar dielectrics, frequency dependence of dielectric constant, applications of
	dielectric materials.
	Magnetic materials- review of basic concepts magnetization, magnetic susceptibility, relative permeability, classification of diamagnetic, paramagnetic
	and ferromagnetic materials, domain hypothesis, hysteresis or BH curve in
	ferromagnetic materials, soft and hard magnetic materials, applications.
Unit4	Semiconductors-
	BandtheoryofSolids, Classification of solids on the basis of energy bandtheory, Fermi-
	Diracstatistics, Conceptof Fermilevelandits variation with temperature, Density of sta
	tes, PositionofFermilevelinintrinsicsemiconductor
	(withderivation)andinextrinsicsemiconductor,
	Conductivityofsemiconductor, Workingofp-njunctionfromenergybanddiagram-
	forward and reverse biased, Halleffectinsemiconductor.
Unit5	Oscillations-
	Free, damped and forced oscillations, resonance, theory of resonant oscillations-
	condition for amplitude resonance, sharpness of resonance, differential equation
	of wave motion, damped harmonic motion- over damped, critically damped and under damped cases, transverse vibrations of stretched string.

Teaching Scheme Examination Scheme						
Practical:2Hrs/Week	ISE III	25 Marks				
Credits:01	Credits:01					

Course Outcomes:

After completion of this course students will be able to:

	Course Outcomes
CO1	Demonstrate basic laws of Physics with experimental process
CO2	Conduct experiments to understand the relationship between variables in physical problems
CO3	Interpret experimental data to examine the physical laws
CO4	Illustrate the relevance between theoretical knowledge and means to imply it in a practical manner by performing various experiments
CO5	Work in teams and understand the effective team dynamics.

List of the Experiments

The student shall perform minimum eightexperiments of the following:

S.N.	Title of the Experiments	Skill / Knowledge Level	СО
1	e/m by Thomson's method.	S1/K2	CO3
2	Determination of radius of curvature of Plano-convex lens by Newton's ring.	S1/K1	CO1
3	Determination of the wavelength of light of a given source using diffraction grating.	S1/K2	CO1
4	Resolving power of telescope.	S1/K2	CO3
5	Study of C.R.O (amplitude and frequency measurement).	S1/K1	CO5
6	Specific rotation of sugar solution by Laurent's half shade polarimeter.	S1/K2	CO4
7	Determination of band gap of a semiconductor.	S1/K2	CO3
8	To study temperature dependence of resistivity of a semiconductor using four probe method.	S1/K2	CO3 CO5
9	To determine the Hall coefficient of a semiconductor material and then evaluate carrier type and its density of charge carrier.	S1,S3/K2	CO1

10	Study of solar cell characteristics.	S1/K1	CO2 CO5
11	Determination of wavelength of Laser using grating.	S1,S2/K2	CO3
12	Determination of numerical aperture of an optical fiber.	S1,S3/K2	CO3
13	To plot the hysteresis loop of a given magnetic material (iron).	S1/K2	CO2
14	To study characteristics of photovoltaic cell.	S1/K2	CO3
15	Study of divergence of Laser beam.	S2,S3/K2	CO2 CO5
16	To measure thickness of fine wire and grating element with the help of Laser source.	S1/K2	CO1
17	To draw V/I characteristics of forward & reverse biased P-N junction diode.	S1,S3/K2	CO3
18	Determination of velocity of sound through water using ultrasonic interferometer.	S1,S3/K2	CO3

Assessment: ISE I-Continuous Assessment of individual student in a batch during each experiment Maximum Marks-25

Course Description: After completing this course student will have a fundamental understanding of the thermodynamics, thermal machine source of energy, power transmission elements, identify manufacturing process and machines

Course Outcomes: After completing the course students will able to

Course	e Outcomes
CO1	Explain basic concepts to be used in Mechanical Engineering
CO2	Apply the principles of thermodynamics to solve numerical problems
CO3	Compare the working principles of Energy conversion devices with their application
	in Mechanical Engineering
CO4	Explain the working principles and basic operating safety procedures of various
	transmission elements employed in Mechanical Engineering.
CO5	Develop the ability to visualize and draw Orthographic and Isometric projection of
	Solids.

Detailed Syllabus:

Detaile	d Syllabus:
Unit 1	Fundamentals of Thermodynamics
	Pressure and pressure measurement, Temperature, Forms of energy, work transfer
	, heat transfer, Laws of thermodynamics, First law for cyclic and non-cyclic
	process, Concept of Heat Engine, Refrigerator and Heat pump, Statement and
	explanation of Fourier's law of heat conduction, Overall heat transfer coefficient,
	Newton's law of cooling, Stefan Boltzmann's law, Concept of heat exchanger,
	types of heat exchanger ,and concept of effectiveness, Refrigeration – Definitions
	- Refrigerating effect, Ton of Refrigeration, COP, Relative COP, unit of
	Refrigeration. Principle and working of vapor compression refrigeration.
Unit 2	Energy Conversion Devices
	Steam generation process, Boiler: Mountings and accessories, working principles
	of Internal combustion Engine, two stoke and four stroke engines, Introduction
	and Working principle of Steam Turbines, Gas turbine, Hydraulic turbines: and
	classification of steam, gas and hydraulic turbine, Working of Pelton wheel and
	Francis turbine, Principles and working of steam power plant and nuclear power
	plant.
Unit 3	Fundamentals of Power Transmitting Elements
	Working principles of shaft, Axle and Spindles. Couplings-types of couplings,
	Friction clutches, Bearing- types of bearing, Brakes – types of brakes, Drives- Belt
	drive: Flat and V belt drive, Open and Cross belt drive, Chain drive, Gears-
	classification of gears, Terminology of Spur gears.
Unit 4	Fundamentals of Manufacturing Process
	Fundamentals of manufacturing process and their application, Casting, forging,
	soldering, Brazing and welding. Differences between soldering, brazing and
	Welding. Description of Electric Arc Welding and Oxy-Acetylene Welding.
Unit 5	Orthographic and Isometric Projection

Orthographic views of different machine parts, Sectional orthographic projection of different machine elements, Principles of Isometric projection, Isometric scale and Isometric views.

CSESC1005 : Programming for problem Solving		
Teaching Scheme	Examination Scheme	
Lectures: 02 hrs./ week	ISE I	10 Marks
Credits:02	ISE II	10 Marks
	End Semester Examination	30 Marks

Prerequisites: Nil Course Objectives

- To understand the fundamentals of computer systems and programming.
- To understand the basic programming paradigms.
- To learn the conditional branching, and iteration.
- To learn methodology which are essential for developing C programs.

Course Outcomes

Students will be able to:

CO1	Understand fundamentals of computer systems and programming.
CO2	Able to define data types and use them in simple data processing applications also he/she must be able to use the concept of pointers, array of structures
CO3	Develop confidence and ability for life-long learning needed for Computer language.

Detailed Syllabus:

	v
Unit 1	Introduction to programming: Components of a computer system: Memory,
	processor, I/O Devices, storage, operating system. Idea of Algorithm:
	Representation of Algorithm, Flowcharts.
	Programming Basics: Structure of C program, writing and executing the first C
	program, Syntax and logical errors in compilation, object and executable code.
	Components of C language. Standard I/O in C.
Unit 2	Introduction to C Language fundamentals:
	The C character set, variables and constants, data types, keywords, expressions,
	statements, precedence, operators- arithmetic operators, sizeof(),relational &
	logical operators, conditional operators, type conversions, type casting.
Unit 3	Conditional Branching, Loops and Functions:
	if, nested if, it else, nested if else switch, goto statement, Loop execution – For
	loop, while loop, Do while loop.
	Functions - Defining a function, passing arguments to functions, call by value,
	idea of call by reference, returning values from function.
	Array's definition (1-D, 2-D). Introduction to structure and union.
	Introduction to Pointers.

DetailedSyllabus:

Unit1	Communication Skills & Soft Skills
	Basic concept, factor's, process and types of communication, principles of effective
	communication, barriers of communication, and how to overcome these barriers,
	basics of soft skills.
Unit2	Non verbal Communication and Corporate Etiquettes
	Body language and its different aspects, voice dynamics & voice modulation,
	professional appearance, clothing etiquettes and corporate dressing.
Unit3	Remedial Grammar and Vocabulary Building
	Parts of speech, types of tense, use of articles, synonyms and antonyms,
	Find out the grammatical errors in the given sentences.
Unit4	Writing Skills and Business Correspondence
	Letter writing, office documents like circulars, notices, minutes, agenda and
	memos report writings- technical report, academic report, accident report, resume
	writing
Unit5	E-Communication
	Introduction to multi-cultural, global cultural traits, email communication and email
	etiquettes

Approved in XXVIth Academic Council

	ETVSE1002: Engineering Exploration
Teaching Scheme: 04Hrs/` Total Credits:2 Contact Hours 40	Examination Scheme ISE II:25 Marks ISE III:25 Marks

Prerequisites: NIL

Course Outcomes :As an outcome of completing the course, students will be able to:

CO1	Explain the role of an Engineer as a problem solver
CO2	Identify multi-disciplinary approach required in solving an engineering problem
CO3	Build simple mechanisms using engineering design process
CO4	Interface different peripherals to Arduino
CO5	Apply basics of engineering project management skills
CO6	Analyze engineering solutions from ethical & sustainability perspectives

Engineering Exploration is a Project-based learning (PBL) based course wherein students will apply their technical knowledge, practical skills to develop a project in a team. A group of 5 students (max) normally will be permitted in a team. A set of need statements will be prepared by team members with the help of course coordinators. These need statements will be converted to Problem Statements. Students will follow the Engineering Design process to develop conceptual design and detailed design.

Few of the activities which can be carried out are:

- Catapult design, weight bearing structure using newspapers, bridge making, activity with straws, colored paper, box of straws, football with papers, paper plane.
- How do you think Engineering design case studies for designing PaniPuri/ tea/ coffee vending/pan making vending machines, grass cutter/mower machine, winding machines, chips making machine, home automation etc (block diagram and components in different blocks), Pugh chart examples.
- Building mechanisms using gears and other components, design mechanisms using linkages, auto inventor for model designing.
- Arduino based experimentation and programming.
- Preparation of timelines for project management.
- Presentation of case studies for ethics, sustainability, and carbon footprint.

Detailed Syllabus:

Contents			
Introduction to Engineering and Engineering Study Introduction to Engineering and Engineering Study: Difference between science an engineering, scientist and engineer needs and wants, various disciplines of engineering, som misconceptions of engineering, Expectation for the 21st century engineer and Graduat Attributes.			

Head of the Electrical Engineering Department

Dean Academics

Module 2	Engineering Design Engineering Design Process, Multidisciplinary facet of design, Pairwise comparison chart, Introduction to mechatronics system, generation of multiple solution, Pugh Chart, Motor and battery sizing concepts, introduction to PCB design
Module 3	Mechanisms 4 Hrs Basic Components of a Mechanism, Degrees of Freedom or Mobility of a Mechanism, 4 Bar Chain, Crank Rocker Mechanism, Slider Crank Mechanism.
Module 4	Platform Based Development Introduction to various platform-based development (Arduino) programming and its essentials, Introduction to sensors, transducers and actuators and its interfacing with Arduino, Introduction to Data Acquisition and Analysis
Module 5	Project Management 3 Hrs Introduction to Agile practices, Significance of teamwork, Project management tools: Checklist, Timeline, Gantt Chart, Significance of documentation
Module 6	Sustainability and Ethics in Engineering 4 Hrs Introduction to sustainability, Sustainability leadership, carbon footprint Identifying Engineering as a Profession, Significance of Professional Ethics, Code of Conduct for Engineers, Identifying Ethical Dilemmas in different tasks of engineering, Plagiarism check for research papers

	INCCC1001: YOGA
	Co Curricular Course (Liberal Learning Course)
Teaching Scheme	
Lectures: 2 hrs./ week	
Tutorial: 00 hrs./ week	
Credits: 02	

Course Description: Yoga - In today's life, there is much more need to experience relaxation and remain focused. The inner connection is very much needed to retain stability. Beyond physical exercise there is much more to do in the field of Yoga. The content of this course includes Relaxation, meditation, rejuvenation and connection with our own self. The introduction of such an experiential course helps to boost self confidence and with regulation of mind through meditation improves concentration. Meditation is basically training the mind to stay on one thought and helps to regulate it. Along with experiential learning, the students are also exposed to learning contained in the supported literature.

Course Outcomes:

After completing the course, students will be able to:

СО	Understand and perform Yoga Asanas
CO	Apply the concept of Mediation in everyday life and studies.
CO	Gain knowledge about Pranayama

Syllabus:

- (1) Perfection in at least 3 types of Yoga-asana, Name of Yoga Asanas shall be mentioned
- (2) Perfection in at least 3 types of Pranayama, Name of Yoga Asanas shall be mentioned
- (3) Regular practice of Yoga Asanas and meditation for 10 minutes during the allotted periods as per the time table and daily at home.

Text Books:

- 1)TheHeartfulness way", HeartfulnessKamlesh Patel and Joshua Pollock
- 2) The Yoga Sutras of Patanjali Sri Swami Satchidananda
- 3)TheYamas and Niyamas Deborah Adele

Assessment:

The evaluation is based on participation and performing Yoga and meditation regularly and perfectly under the guidance by Yoga Teachers in a class as per schedule. Meditation trainers will observe intrinsic goodness, the right attitude and a happy and joyous way of doing things.

Detailed Syllabus:

Unit 1	First order ordinary differential equations and its applications				
	Exact, linear and Bernoulli's equations, application of first order ordinary differential				
	equations: orthogonal trajectories, simple electrical circuit, D'Alembert's principle,				
	one dimensional conduction of heat.				
Unit 2	Multivariate Calculus [Differentiation]				
	Limit, continuity, partial derivatives, Euler's theorem on homogeneous functions,				
	implicit functions, composite functions, total derivatives, Jacobians and their				
	applications, error and approximations, maxima and minima of functions of two				
	variables, saddle points, Lagrange's method of undermined multipliers.				
Unit 3	Multiple integrals and its applications				
	Double and triple integrals (Cartesian and polar), change of order of integration in				
	double integrals, change of variables (Cartesian to polar), applications: to find area				
	and volume.				
Unit 4	Fourier Series				
	Fourier Series (Dirichlet's conditions), Periodic functions, convergence of the Fourier				
	series, Euler's formula, Fourier series expansion with period 2π , 2L, Fourier series of				
	even and odd functions, Half range sine and cosine series, applications to harmonic				
	analysis.				
Unit 5	Probability Distribution				
	Discrete probability distributions - Binomial distribution, Poisson distribution,				
	Continuous Distribution - Normal distribution, Uniform distribution, Exponential				
	distribution.

Course description: The course is mandatory course for first year B. Tech. Civil Engineering, Mechanical Engineering and Electrical Engineering programs in first semester. The course objective is to teach fundamental principles in Chemistry and relate the understanding to applications.

	Course Outcomes	Bloom's Taxonomy Level
CO1	TounderstandfundamentalofChemistryrelevanttoEngineeringfield.	K1
CO2	To differentiate between primary and secondary battery as well as battery and fuelcell.	K2
CO3	Toequippedwithbasicknowledgeofpolymerreinforcedcomposites, applications of semiconductor conducting polymers in energy harnessing.	K2
CO4	Tounderstand BasicPrincipals of Green chemistry for minimizing waste.	K1
CO5	Toapplytheprinciplesof water softening to hard water and understand consequence of water quality degradation.	K3

	Course Contents	CO
Unit1	Battery Science Introduction – Classification of batteries, Primary and secondary batteries, reserve batteries with examples, battery components and their role-Characteristics of Battery. Batteries and their importance, basic requirements for commercial batteries, construction, working and applications of Ni-Cd, and Lithium ion battery, fuel Cells- Differences between battery and fuel cell, electrical vehicle battery construction, working advantages and disadvantages of EV Car.	CO1, CO2
Unit2	Electrochemistry Single electrode potential, sign convention, reversible and irreversible cells measurements, specific conductance, equivalent conductance, variation of equivalent conductance with dilution, migration of ions Nernst equation and application, determination of EMF of cell, applications of EMF series. Chromatographictechniques Basics and applications of chromatographic technique- thin layer chromatography, flame photometry potentiometric titrations, conductometry, PH metry	CO1, CO2
Unit3	Lubricants Introduction, mechanisms of lubrication-fluid film, boundary film &extreme pressure,types of lubricants—solid lubricants—molybdenum disulphide, graphite. Liquidlubricants—vegetable, animal, mineral& syntheticoils, semisolidlubricants, greases, lubricating emulsions—oil in water, Water in oil, properties of lubricants & its significance—physical properties and	CO1, CO3

	significances viscosity& viscosity index, flash&fire point, cloud& pour point,	
	acidvalue, saponification value, steam emulsification number	
	ConductingPolymers: Definition- classification- intrinsic and extrinsic,	
	mechanism of conduction in doped poly acetylene -applicationssynthesis &	
	mechanism of conduction in poly-acetylene	
	Composites: Basics of composites, Composition and Characteristic properties	
	of composites. Types of Composites: Particle, Fiber, Reinforced, Structural, applications.	
	Nanomaterials: Introduction, fullerenes, carbonnanotubes, nanowires,	
	electronic and mechanical properties, synthesis of nanomaterials, applications	
	of nanomaterials-Catalysis, Electronics & Telecommunication, Medicines,	
	Energy sciences.	
Unit4	Energy sciences& Green Chemistry:	CO1,
CIIIt4	Green Chemistry: Introduction- definition of green chemistry, need of green	CO1,
	chemistry, basic principles of green 12 principles of green chemistry principles	CO4
	of green chemistry, waste minimization and atom economy, reduction	
	of green enemistry, waste imminization and atom economy, reduction of officerials and energy requirement, significance, concept of	
	sustainability,industrialapplicationsofgreen chemistry	
	Fuels: Fuel- classification, characteristics of good fuel, comparison between	
	solid, liquid, gaseous fuel, alternative and non conventional fuels, calorific	
	value, low and high calorific value, units of calorific value, determination of	
	calorific value by Bomb calorimeter, fuel cells, solar cell and polymer	
	cell,hydrogen-oxygenfuelcell,advantagesand applications.	
Unit5	Water treatment:	CO1,
	Introduction, sources and impurities in water, portable water; meaning and	CO5
	specifications(WHOstandards), hardnessofwatertypes,determination of hardness	
	using EDTA titration and numerical, softening of hard water by ion- exchange	
	process. numerical problems on hardness of water, biological oxygen	
	demand(BOD)and chemical oxygen demand(COD), determination of COD of	
	industrial waste water, purification of water for town supply, principal wastage	
	treatment – industrial wastewater	
	ucalificht – filuustifat wastewater

Lectures: 3 hrs/ week	ISE I	15 Marks					
Tutorial:0	ISE II	15 Marks					
Credits: 3	ISE III	10 Marks					
End Semester Examination 60 Marks							

Prerequisites: -Nil Course description:

This is the basic course in Electrical Engineering which introduces the basic concepts, different theorems and laws, Electrical circuits to the students.

The objectives of the course are to

- 1. Impart a basic knowledge of electrical quantities such as current, voltage, power, energy and frequency
- 2. Acquaint with basic laws and theorems of electrical networks
- 3. Explain fundamentals of magnetic circuits and alternating current circuits and solve the circuit problems
- 4.Understand the fundamentals and concept of electrical energy storage devices, wiring fundamentals, safety devices and metering

	Course Outcomes						
CO1	Explain the fundamentals of circuit theorems and apply to solve the DC network.						
CO2	Understand and analyze the electromagnetic circuits.						
CO3	Explain and analyze single phase and three phase AC circuits.						
CO4	Demonstrate the various parameters required for the battery storage system and its applications.						
CO5	Demonstrate various Electrical wiring systems and its accessories and Energy consumption calculations.

Doon Academics

Detailed Syllabus:

Ι

II

III

 \mathbf{V}

Unit D.C. Circuit:

Introduction of circuit active and passive parameter of electrical circuit, Kirchhoff current and voltage laws, Source conversion, series and parallel circuit, current and voltage division rule, Delta-Star and Star-Delta conversion, Node Analysis and Mesh Analysis methods Network Theorem: Superposition theorem, Thevenin's and Norton's theorems Maximum power transfer theorem, Charging and discharging of capacitor, Time constant for RC circuit

Unit | **Electromagnetic Induction:**

Faraday's laws, statically and dynamically induced emf, self and mutual inductance, coefficients of coupling, dot convention, inductance in series and parallel, Magnetic Circuits: Terms related with magnetic circuits, Magnetization curve, Magnetic leakage and fringing, Leakage coefficient, Series and parallel circuits, magnetic hysteresis, and eddy current loss, Rise and decay of current in inductive circuit, Time constant for RL circuit

Unit | Single phase and Three phase AC Circuits:

Brief description of electrical energy Generation, Transmission and Distribution system, Concept of single phase supply, Terms related with A.C. quantities, pure resistive, inductive and capacitive circuits, Complex and phasor representation of AC quantities, R-L-C series and parallel circuits, resonance in series and parallel circuits, Q-factor of coil ,Three phase AC Circuits: Concept of Three phase supply, star and delta connections line and phase values, three phase balanced star and delta loads and their phasor diagrams.

Unit | Energy Storage Systems: IV | Types of storage battery (

Types of storage battery (Lead Acid, Lithium Battery etc.), Charging of a cell, SoC, Discharging of cell Current, Capacity of the Cell, Depth of Discharge (DOD) of the cell, Capacity of a Secondary Cell, Efficiency of the Cell. Applications of batteries. Super capacitors: Fundamental, Construction and application. Calculation of Inverter Capacity as per total load, Calculation Battery Back-up Time,

Unit | Electrical Wiring, Accessories and Metering Devices:

Accessories used for electrical wiring, Types of insulated wires & wiring systems, Concealed conduit electrical wiring systems, Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Concept of earthing, Power rating of different domestic appliances, KWh (Unit) / Energy consumption calculations.

Types of lamps- Light Emitting Diode (LED) Lamps, Fluorescent Lamps and Compact Fluorescent Lamps (CFL),

Principle and working of Energy meter, Concept of KVAh Billing system, and kWh billing system

Prerequisites: Nil

Course description: Basic electronic circuits is a one-semester course compulsory to all first year engineering students of the department

Course Objectives:

- To impart knowledge of electronic circuit components and devices
- To create awareness of concepts related to CB, CE and CC types of transistor, load lines, h-parameter, oscillators, power amplifiers using BJT,
- To introduce basic concepts of Op-Amp Circuits
- To introduce basic concepts of Filters, Oscillators

Course Outcomes: After completing the course students will able to

Course Outcomes

- 1. Analyze the principles and working of diode with its applications, power supply
- 2. Describe working of transistors, analyze CE configuration
- 3. Describe the transistor feedback, power amplifiers
- 4. Explain diode wave shaping circuits, passive filters, various oscillators applications of transistor
- 5. Explain basic principles and applications of Op-Amp Circuits

Detailed Syllabus:

Unit 1	Power Supplies:
	Review of Semiconductor Physics: Introduction to PN- junction diode, I-V
	characteristics of a diode; BJT, FET and MOSFET; static characteristics of PN-
	Junction diode
	DC Power Supply: Single phase half wave, full wave and bridge rectifiers-
	expression for ripple factor, Efficiency, Diode Ratings,
	Filters: Capacitor, Inductor, LC Filters
	Regulated Power Supply: concept, Simple Voltage regulator, Series regulators,
	IC voltage regulator

Head of the Electrical Engineering Department

Dean Academics

Unit 2	Small Signal Amplifiers: Small Signal Amplifiers: Structure and I-V characteristics of a BJT, BJT as an amplifier: Concepts of CB, CE, CC configurations, Input & output characteristics of common emitter configuration, comparison of three configurations, thermal runway, and biasing, Concept of load lines, methods of coupling, concept of transistor as a switch, h-parameters, simplified CE hybrid mode, -3dB bandwidth
Unit 3	Feedback and Power Amplifiers: Feedback Amplifiers: Multistage amplifier, Negative and positive feedback, Types of feedback amplifiers, Voltage series/shunt, Current series/shunt amplifiers Power Amplifiers: Classification- class A, class B, class AB, class C, concept of harmonic distortion, and cross-over distortion in power amplifiers
Unit 4	Applications of diodes and transistors: Wave-Shaping Circuits: Pulse characteristics, RC-low pass, high pass circuits, differentiating and integrating circuits, clipping and clamping circuits using diodes Multivibrators: Astable, monostable&bistablemultivibrators Oscillators: RC phase shift, LC, Hartley, oscillators (using BJT's only)
Unit 5	Op-Amp Circuits and specialized ICs with applications: Op-Amp Fundamentals: Symbol block diagram representation, equivalent circuit Idealized analysis of op-amp circuits. open loop Op-amp configurations, negative feedback. Practical op-amp: Input bias and offset voltage and current, thermal drift, Common mode configuration and rejection ratio. Oscillators: Phase shift oscillator and Heartley oscillator using op-amps Signal Generators: Sine, triangular and square wave generators using op-amps Special Function ICs: Timer IC 555, applications

Practical: 2 Hrs/Week	ISE III	25 Marks					
Tutorial:0 hrs	ESE	00 Marks					
Credits: 1							

Course description: Lab Analog Electronic Circuits is a one-semester course compulsory to all second year engineering students of the department

Course Objectives: The objectives of the course are to-

- 1. To expose the students to a variety of practical circuits using various analog circuits.
- 2. To acquire skills of designing and testing integrated circuits

Course Outcomes:

CO1	Use basic electronic components such as diodes for various applications
CO2	To plot and analyze transistor amplifier characteristics and describe performance of multi-vibrators
CO3	Describe the performance of transistor power amplifiers / oscillators
CO4	Perform the experiments based on linear and nonlinear op amp circuits
CO5	Construct the circuits for various applications using analog IC's

List of the Experiments

The student shall perform minimum ten experiments of the following

Sr. No.	Title of the Experiments
1	Regulation characteristics of half wave with and without filter
2	Regulation characteristics of full wave rectifier with and without filter
3	Measurement of line regulation and load regulation of shunt regulator
4	Measurement of line regulation and load regulation of series regulator
5	Measurement of h parameters of CE amplifier
6	Frequency response of RC coupled amplifier
7	Frequency response of Transformer coupled amplifier
8	Study of RC low pass, high pass circuit
9	Study of clipper
10	Study of clamper
11	Study of differentiator
12	Study of integrator
13	Study of IC 555
14	Build Inverting amplifier using IC 741 and plot its frequency response
15	To build Non-inverting amplifier using IC 741 and plot its frequency response
16	To build summing amplifier in inverting and non-inverting mode

17	To measure Op-Amp parameters such as Input offset voltage, input bias current, Input offset current, PSRR and CMRR					
18	To measure slew rate of Op-Amp					
19	Study of Phase shift Oscillator					
20	Study of Hartley Oscillator

	EEPCC100	1 Electrical Engineerii	ng Practices	
Teaching Schem	ie	Examination Schen	ne	
Lectures	: 1 Hrs/Week		:-	
Total Credits	: 1	ISE II	: 15 Marks	
		ISEIII	:10 Marks	

Course Objectives:

The objectives of the course are to

- 1. To understand causes of shocks, their prevention and electrical safety.
- 2. To impart knowledge of principles of measurement
- 3. To analyze and minimize errors in measurement
- 4. To enable students to learn principles of measurement of electrical quantities

Course Outcomes: After completing the course, students will able to:

CO1	Explain causes of shocks, their prevention and implement electrical safety.
CO2	Explain basics of measurement
CO3	Demonstrate principles of measurement of electrical quantities and analyze measurement
	errors.

Detailed Syllabus:

Unit-	Introduction To Electrical Safety, Shocks And Their Prevention:
	Terms and definitions, objectives of safety and security measures, Hazards associated with electric current and voltage, principles of electrical safety, Primary and secondary electrical shocks, possibilities of getting electrical shock and its severity, medical analysis
	of electric shocks and its effects, shocks due to flash/ Spark over's, prevention of shocks, safety precautions against contact shocks, flash shocks, burns, residential buildings and
	shops
Unit 2	Basics of Measurement Concepts relating to Measurements:
	True value, Accuracy, Precision, Resolution, Drift, Hysteresis, Dead-band, Sensitivity. Errors in Measurements. Basic statistical analysis applied to measurements: Mean, Standard Deviation, Six-sigma estimation, Cp, Cpk
	Measurement of Electrical quantities: Measurement of voltage, current, Measurement of three-phase power under balanced and unbalanced condition, Measurement of reactive power, Measurement of energy.

EEPCC1002: Lab Electrical Engineering Practice					
Teaching Scheme	Examination Schen	ne			
Practical: 2Hrs/Week	ISE III	25 Marks			
Credits:1					

Course Outcomes: After completion of this course students will be able to:

CO1	Verify Network theorem to determine the electric circuit parameters
CO2	Demonstrate and verify relationship of various electric circuit parameters
CO3	Demonstrate the fundamental principle for measurement of power in single phase and
	three phase circuit
CO4	Calculate the different performance parameters of energy storage devices
CO5	Compare performance of various types of lamps.

Note: The students will be required to perform the 8 experiments from the above list and any other relative experiments designed on the basis course

List of the Experiments

The student shall perform minimum TEN experiments from the following list

_	Title of the Experiments	Skill /	CO	Marks
Sr.		Knowledge		for ISE
No.		Level		
1	Perform an experiment for Verification of Thevenin's	K3, S2	CO1,	3
	theorem and Norton's theorem		CO3	
2	Perform an experiment for Verification of	K3, S2	CO1,	3
	Superposition theorem		CO3	
3	Perform an experiment for Verification of Maximum	K3, S2	CO1,	3
	power transfer theorem		CO3	
4	To Perform an experiment for the demonstration of	K2, S2	CO1,	4
	electromagnetic induction phenomenon		CO3	
5	To study charging and discharging of capacitor.	K2,S2	CO1,	3
			CO3	
6	To Perform an experiment to plot hysteresis loop/B-H	K2,S2	CO1,	3
	curve of magnetic material		CO3	
7	Measurement of L and C using a LCR meter	K3,S2	CO2	
8	Measurement of parameters of a choke coil using 3	K2,S2	CO2,	
	voltmeter / 3 ammeter methods		CO3	
9	To perform experiment for Measurement of current,	K2,S2	CO2,	4
	voltage and power in R-L-C series exited by single phase AC supply		CO3	
10	To Study the R-L-C series resonance circuit	K2,S2	CO2,	3
			CO3	

11	To study relation between phase and line values of voltages and currents and measurement of three phase power under balance condition for Star and Delta	K3,S2	CO3, CO4	3
12	connected load Measurement of Power in three-phase circuit using	K3,S2	CO3,	
	wattmeter		CO4	
13	To perform an experiment for fully charged and discharged conditions of a Lead-acid battery	K2,S2	CO5	3
14	To perform experiment for calculation of the battery backup time as per load capacity for residential consumer	K2,S2	CO5	3
15	Comparative study of energy consumption between LED,CFL and Solar light –A case study for residential consumer	K2,S2	CO3, CO4	4
16	To perform an Experiment on Measurement of Lumen/Lux of different lamps by lux meter	K2,S2	CO5	3
17	To perform experiment for measurement of power consumption of a LED lamp, CFL lamp	K2,S2	CO5	3

Note: The students will be required to perform the 8 experiments from the above list and any other relative experiments designed on the basis course

EEIKS1101 : Vedic Mathematics						
Teaching Scheme Examination Scheme						
Lectures: 2Hrs/ week	ISE I	10 Marks				
Tutorial:OHrs	ISE II	10 Marks				
Credits: 2	ISE III	0 Marks				
	End Semester Examination	30 Marks				

Prerequisites: - NIL Course description:

This is the basic course in Electrical Engineering which introduces the basic concepts, different theorems and laws, Electrical circuits to the students.

The objectives of the course are to

- 1. Enhance computation skills in students through Vedic Mathematics ·
- 2. Develop logical and analytical thinking
- 3. Promote joyful learning of mathematics
- 4. Discuss the rich heritage of mathematical temper of Ancient India

	Course Outcomes
CO1	To understand the techniques of high speed addition and subtraction
CO2	To understand the concept multiplication and division of two or three digits numbers
CO3	To apply reverse squaring to find square roots of numbers. and identify cube and cube roots.
CO4	To understand concepts of Algebra and Geometry of Vedic Mathematics
CO5	Appreciate the Mathematical advancements of Ancient India.

Detailed Syllabus:

Unit I	Vedic Maths- High Speed Addition and Subtraction Vedic Math: History of Vedic Maths and its Features, Vedic Maths formulae: Sutras and Upsutras, Addition in Vedic Maths: Without carrying, Dot Method 77, Subtraction in Vedic Math: NikhilamNavatashcaramamDashatah, Fraction -Addition and Subtraction
Unit II	Vedic Maths- Miracle Multiplication and Excellent Division Multiplication in Vedic Math: Base Method (any two numbers upto three digits). Multiplication by UrdhvaTiryak Sutra, Miracle multiplication: Any three-digit number by series of I's and 9's • Division by UrdhvaTiryak Sutra (Vinculum method)

Unit III	Vedic Maths-Lightening Squares and Rapid Cubes Squares of any two-digit numbers: Base method, Square of numbers ending in 5: EkadhikenaPurvena Sutra, Easy square roots: Dwandwa Yoga (duplex) Sutra, Square root of 2: BaudhayanaShulbasutra, Cubing: Yavadunam Sutra
Unit IV	Vedic Maths-Enlighten Algebra and Geometry Factoring Quadratic equation: Anurupyena, Adyamadyenantyamanty Sutra, Concept of Baudhayana (Pythagoras) Theorem, Circling a square: BaudhayanaShulbasutra, Concept of pi: BaudhayanaShulbasutra, Concept angle (8) 00, 300, 450, 600 and 900: Baudhayana number

INCCC1002: NSS / INCCC1003: Sports/INCCC1004: Club Activities	
Co Curricular Course (Liberal Learning Course)	
Teaching Scheme	
04 hrs./ week	
Tutorial: 00 hrs./ week	
Credits: 02	
ISE-III 50 Marks	

Course Description: Co-curricular activities are activities that take place outside of a course's curriculum but are related to academics in some way. Although involvement is not part of classroom instruction, it does supplement and enhance a student's academic experience.

NSS: Aim of NSS activities to Gain skills in mobilizing community participation; To acquire leadership qualities and democratic attitude; To develop the capacity to meet emergencies and national disasters; To practice national integration and social harmony. Types of Activities are not limited to Cleaning, Plantation

Blood Donation Camps, Awareness Rallies, Health Care Camps, Stage shows or a procession creating awareness of such issues as social problems, education and cleanliness but decided by Institute NSS Coordinator. Students will participate in NSS Activities throughout the semester.

The evaluation is based on participation in regular NSS activities.NSS Coordinator along with departmental NSS coordinator will certify at the end of semester about participation. Program head will notify the exam section about awarding credits to the students.

Sports activity: Sporting Activities means performing or participating in the Sport in any capacity which includes, but is not limited to, participation in training, competitions, coaching or as an official.

Students will participate in Sports Activities throughout the semester. Gymkhana vice president will coordinate along with the sports coordinator of the department. The coordinators will certify at the end of semester about participation. Program head will notify the examination section about awarding credits to the students. The evaluation is based on participation in regular sports activities.

Club activities: Government Engineering College Aurangabad has various clubs that focus on specific interests such as robotics, coding, literature, environment, etc. These clubs often organize events, workshops, and competitions that provide students with opportunities to learn new skills and showcase their talents. Students will participate in Club Activities throughout the semester. Faculty coordinators will coordinate along with student bodies the activities of the club.

The Faculty coordinators will certify at the end of semester about participation of students . Program head will notify the examination section about awarding credits to the students.

Dean Students affairs and all program heads will formulate additional modalities for smooth conduction of co curricular activities as and when required.
